

SEED Defence

Protective structures and specialist construction.

SEED Defence brings together protective-structure design, fabrication and construction capability within SEED Group.

Protective structures

Design and fabrication of protective doors and enclosures, with project-specific requirements reviewed by the engineering team.

Industrial construction

Structural work, building envelopes and coordinated building services for specialist facilities.

Design-to-site coordination

Engineering documentation and fabrication coordination connected to project delivery.

Selected experience

SEED records completed specialist workshop construction and building-services coordination. Its industrial programme experience also includes coordinated structural and building-services work.

Project requirements

The design basis, required performance, verification and delivery scope are agreed for each project. Capability in design and fabrication does not establish certification or a rating for an individual protective assembly.
